

# Postman workshop-lab setup

By Suresh Parimi

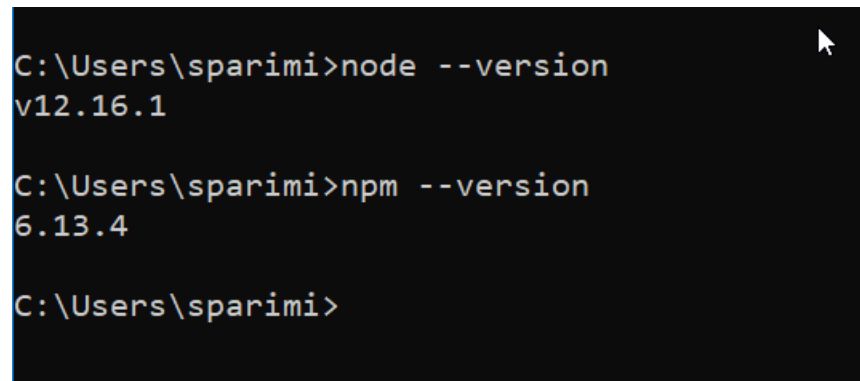

## Pre-training -lab setup documentation

1. Install a full version of Postman. <https://www.getpostman.com/>
2. Install Node.js, Node Package Manager (NPM), and Newman
  - <https://nodejs.org/en/>
  - <https://www.npmjs.com/package/newman>

How to verify the installations:

To check if you have already installed nodejs on your machine, Go to command line Interface using cmd in search bar in Windows.

Type the commands as is in below screen:

```
C:\Users\sparimi>node --version
v12.16.1

C:\Users\sparimi>npm --version
6.13.4

C:\Users\sparimi>
```

If you see the versions for both NodeJS and npm then you have installed both of them correctly

3. Next, install newman using below command     `npm install -g newman`

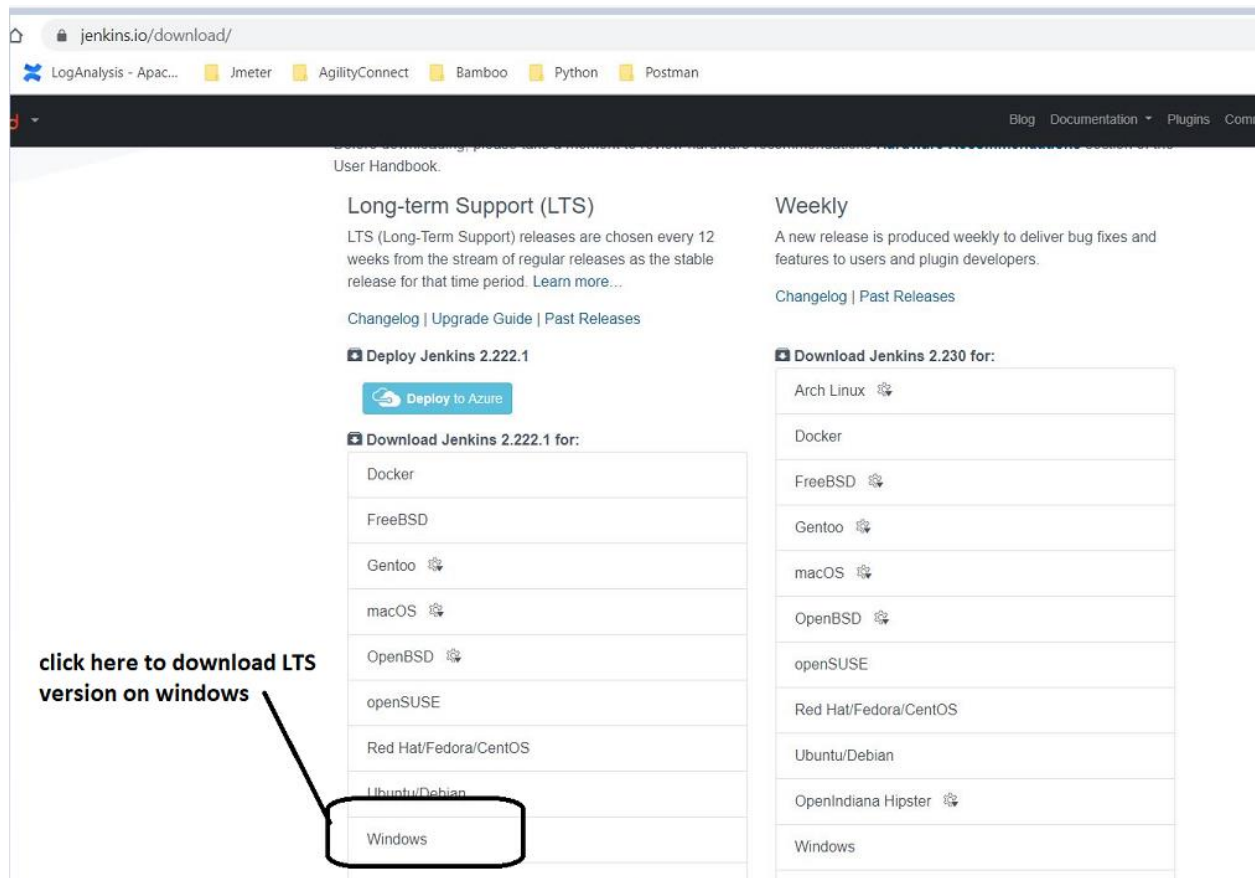

Next install Jenkins on your machine using below link and by following the instructions:

4. Install JAVA SDK installed on your machine-

<https://www.oracle.com/java/technologies/javase-jdk8-downloads.html>

5.Install Jenkins on windows :

Using the below link install Jenkins on your windows machine:

If you have free time, google an API and try to paly around postman console and run a GET request.

That's it for now. See you in workshop.
